

Fertilizer Dosing Module/Controller

The fertilizer Dosing Module / controller can be designed as per your requirement and come with two fertilizer dosing (A+B) for EC and one acid /alkali dosing for pH control/monitoring, time control for fertilizer dosing etc. The system available with pre-rinse and post rinse facility and recipes to schedule as per your requirement for daily, weekly and forever.

This is possible to automatic controlling of fertigation dosing which avoid all manual work which also benefits to any fertigation wastage. The system is precisely controlling EC and pH as per set value. Also benefits to small farmers/growers with low investment with minimum irrigation valve controlling. This is very good, precise and economical system designed for small farmers those want to start with low investment.

Fertigation Dosing Module/ Controller Features:-

- Two EC and one acid/alkali dosing control.
- Time controlled fertilizer dosing.
- Pre-rinse and post rinse facility which is very important in fertilizing.
- Latest technology which adds benefits of present micro irrigation.
- Easy and economical up gradation with minimum down time.
- Weather proof enclosure as optional for outfield.
- Latest technology which gives precise and long term solution.
- User friendly simple operating.
